

### Assignment

1. Write a C program to pass an array containing age of persons to a function. The function created should find average age and display it in main function.
2. Write a program to read n number of values in an array and display it in reverse order using two dimensional array.
3. Make program to find whether a number is prime or not prime using above 4 categories of user defined functions.
4. What is recursive function, what are the advantages of recursive function? Referring to the concept of recursive function, make program that takes a positive integer (from the keyboard) and calculates the factorial of that number. This calculation is done as repeatedly calculating  $fact * (fact - 1)$  until fact equals 1. **Note: (1)** Uses recursive function to calculate the factorial of a given number and **(2)** try to insert if...else condition inside after and compare the two outputs.
5. Create a structure named "Employee" to store employee details such as employee ID, name, and salary. Write a program to input data for three employees, find the highest salary employee, and display their information.
6. Make a program in C to calculate the length of the string using function returning with pointer
