

RICO MARKETA Trusted Digital Marketplace for Modern Marketers* The problem

Sellers operating in modern organised markets struggle to promote their products and services beyond the physical boundaries of their market stalls. Customers who are not physically present have no way of knowing what products are available, at what price or from which seller. This limits sales opportunities and forces sellers to depend entirely on foot traffic. A web application that gives each seller a dedicated page to showcase and promote their products would solve this visibility problem, allowing customers to discover available goods from anywhere at any time.

Beyond promotion, there is a deeper issue of trust and accountability in market commerce. Generic platforms have no connection to verified business. In this solution, trust is built because access is controlled by the market leader, who approves only legitimate sellers. This structure also benefits the government - since every registered seller and their sales activity is recorded on the platform, tax authorities can easily track revenue generated by each seller and ensure fair taxation. This transforms an informal, hard-to-monitor market environment into a transparent, accountable digital ecosystem.

* Key Users - Internal Users (Beneficiaries)

User	Benefit
Market sellers	get a personal page to promote products reach more customers
Customers	Browse Verified products from sellers in one trusted place.
Market leader / Admin	Controls seller access, maintains trust and order

*Key partner - External User

Partner	Role
Market Authority / Management	Grant sellers access, guarantees platform legitimacy.
Government / Tax Authority	Tracks seller activity and revenue for tax collection
Supplier / Wholesalers	Keep sellers stocked with products to promote
Delivery / Logistic services	Help fulfill orders placed through the platform
payment providers	Enable secure, traceable transactions
